

Seal Compatibility Quick Guide

Commercial reference for preliminary configuration discussions

Document ID	HEL-SEAL-GUIDE-2026
Version	1.2
Status	Approved
Effective date	10 March 2026
Owner	Application Engineering
Access	Sales, Service, Engineering

Temperature guidance

Seal material	General continuous-temperature guidance	Typical use
EPDM	Up to 90°C standard industrial; HX-520 hygienic EPDM up to 125°C	Water, cleaning solutions, selected chemicals
FKM	Up to 120-140°C depending on product configuration	Hot water, hydrocarbons, selected chemicals
PTFE	Up to 140-160°C depending on product configuration	High-temperature and chemically demanding applications

Important limitations

Chemical compatibility depends on concentration, temperature and exposure time. Temperature rating alone is not sufficient.

For customer-facing recommendations involving aggressive chemistry, request a fluid composition or safety data sheet and route the configuration to Application Engineering.
