

Proposal PR-2026-052 - Delta Process GmbH

Technical-commercial proposal for Industrial cleaning systems application

Proposal ID	PR-2026-052
Customer	Delta Process GmbH
Country	Germany
Date	2026-06-06
Status	Closed / Historical
Owner	Helios Sales Engineering
Access	Sales, Service

1. Customer requirement

Requirement	Customer condition
Fluid	Alkaline cleaning water
Operating temperature	92°C
System pressure	6 bar
Required flow	60 m³/h
Duty	18 h/day

2. Proposed solution

HX-240 with FKM seal subject to chemistry review

Hydraulic duty fits HX-240. Because operating temperature exceeds EPDM guidance and fluid is alkaline, FKM plus final chemical compatibility review was recommended.

Reference product limits considered during proposal preparation: 10 bar maximum pressure; 95°C continuous fluid temperature; 15-85 m³/h flow range.

3. Configuration notes

- Wetted material: 316L stainless-steel wetted parts.
- Seal arrangement: FKM seal subject to chemistry review.
- Final motor sizing to be confirmed against detailed duty point and site electrical standard.
- Installation design, pipe stress and NPSH validation remain customer / EPC responsibilities unless explicitly included.

4. Commercial assumptions

- Proposal is based on the stated process conditions only.
- Material and seal compatibility are subject to complete fluid information.
- Any change in temperature, pressure, fluid composition or duty cycle requires review.
- This historical proposal is provided as enterprise knowledge and is not a current quotation.

5. Sales-engineering note

This proposal may be used as precedent for similar applications, but the current approved product documentation and latest customer conditions must take precedence.
